

# **API för SameTaste**

### Introduction

This is the documentation for Version 0 of the API for SameTaste.

# **Response Formats**

The default response format is JSON application/json.

# **Authentication**

The API does not require any authentication.

#### **Prefix**

All Routes / End Points need to be prefixed with mpp.erikpineiro.se/dbp/sameTaste

## **Resources**

```
USER
{
   id: id,
   alias: string,
   favs: [image_id, image_id, ...]
}
// The image_id are ids from objects in the Met's collection (as presented by that API)
```

# **All Routes / Endpoints**

#### **USER**

#### **GET USERS**

General Access: /users.php will respond with an array of all users in the DB.

Possible Response Status Codes:

200 (OK)

400 Bad Request: Various Response Status Code: 200 (if ok).

Response: An array of all users

**Examples** 

mpp.erikpineiro.se/dbp/sameTaste/users.php

#### **ADD FAV**

Access: /users.php Method: PATCH

Required headers: "Content-type": "application/json; charset=UTF-8"

Data to the server must be sent in JSON-format. Adds the sent fav to the favs of the specified user.

Possible Response Status Codes:

200 OK: If addition went ok or the user already had that imageID as fav

400 Bad Request: Various

409 Conflict: If the user already has the maximum number of favs

404 Not Found: If user does not exist in DB

415 Media not supporter: Are you sure you sent a JSON?

If the response code is 200, the API will answer with the updated array of users (all users, as if it were a GET USERS-request).

#### Examples

endpoint: mpp.erikpineiro.se/dbp/sameTaste/users.php
method: PATCH
headers: "Content-type": "application/json; charset=UTF-8"
body: "{"id": user\_id, "addFav":image\_id\_x}"
// This will add the id image\_id\_x to the user's favs.
// Note that image\_id and user\_id must be integers

#### **REMOVE FAV**

Access: /users.php Method: PATCH

Required headers: "Content-type": "application/json; charset=UTF-8"

Data to the server must be sent in JSON-format.

Removes the sent fav from the favs of the specified user. If the user does not have the specified fav the server will respond with a 404 status (Not found).

Possible Response Status Codes:

200 OK: If deletion went ok 400 Bad Request: Various

404 Not Found: If user\_id does not exist in DB or image\_id is not among user's favs.

415 Media not supporter: Are you sure you sent a JSON?

If the response code is 200, the API will answer with the updated array of users (all users, as if it were a GET USERS-request).

#### Examples

endpoint: mpp.erikpineiro.se/dbp/sameTaste/users.php
method: PATCH
headers: "Content-type": "application/json; charset=UTF-8"
body: "{"id": user\_id, "removeFav":image\_id\_x}"
// This will remove image\_id\_x from the users' array favs
// Note that image\_id and user\_id must be integers
